

# UFOs, Aliens, and Demons: An Astrophysicist Explains

Today I have Dr. Hugh Ross with me in a most fascinating conversation. Dr. Ross is an astrophysicist, an astronomer, and a committed believer—and he came to faith not through church or family, but through science. He studied cosmology as a teenager and became convinced the universe had a beginning, which meant it had a Beginner. He read through every major religion’s texts and found the Bible was the only one that accurately predicted scientific discoveries without error. Now, Dr. Ross has spent decades as a reluctant expert on UFOs because everywhere he worked, they made him process the UFO reports. What he’s found is remarkable: about one to ten percent of UFO sightings can’t be explained by natural or man-made phenomena—but they violate the laws of physics. They’re real, but they’re not physical. As Christians, we know exactly what that means. We’re going to talk about the interdimensional hypothesis, why interstellar travel is physically impossible, and how the occult opens doors to these demonic encounters.”
